

Group E – SPRINT #2 RETROSPECTIVE

Committed stories: 8 (from story#7 to story #13)

Successfully implemented stories: 8

Total story points for the sprint: 30

Problems that we faced:

- Docker configuration
- We had to adapt code from the previous sprint because the stories of the current sprint were based upon what we did previously and they required some changes.

How we plan to overcome the problems in the next sprint:

- Better planning to avoid useless refactoring
- Effective time management

Things that we are proud of:

- We learned how to use docker
- Some members had got a chance to try out pair programming
- We have managed the VersionControlSystem in a much better way, avoiding code losses and inconsistencies/conflicts.
